EDUCATION

BSc (Hons) Cyber Security & Digital Forensics
(First Class Honours)

Kingston University London
2025 - 2026

Higher National Diploma In Cyber Security

ESOFT Metro Campus
2023 - 2025

CERTIFICATIONS

Certified Ethical Hacker (CEH) - Course is completed (Pending for final exam)

EC - Council
2026

SOC Fundamentals

LetsDefend
2026

Cyber-Security Fundamentals

University Of London
2026

Cyber-Security Certificate - In Progress

Google
2026

Cyber-Security Professional - In Progress

Microsoft
2026

PROFILE

Cyber Security graduate with hands-on experience in SOC monitoring, SIEM, Active Directory security, and threat detection, supported by practical lab projects using Wazuh, Kali Linux, BloodHound, PowerShell, and Python.

PROJECTS

Active Directory Red Team Lab

Platforms and Technology Used: Windows Server 2019, Windows Server 2008, Windows 10 Client, Active Directory Domain Services, DNS, Group Policy, SQL Server, Metasploitable3, VMware, PowerShell, BloodHound, SharpHound, PowerView, Mimikatz, Rubeus, Inveigh, Hashcat, John the Ripper

- Designed and deployed an enterprise-style Active Directory lab using multiple Windows Server and client VMs to simulate a corporate environment.
- Configured AD DS, DNS, Group Policy, and SQL Server, and performed enumeration, privilege escalation, Kerberoasting, password spraying, and lateral movement using tools including BloodHound, PowerView, Mimikatz, Rubeus, and Hashcat.
- Analyzed authentication events and attack paths to gain hands-on experience in Active Directory security, identity management, and attack detection.

SIEM-Based SOC Lab (Wazuh)

Platforms and Technology Used: Wazuh SIEM, Windows Server, Ubuntu, Kali Linux

- Deployed and configured Wazuh SIEM on Ubuntu for centralized log monitoring
- Integrated Windows Server as an endpoint agent for log collection and analysis
- Simulated brute-force attacks and analyzed Event ID 4625 (failed login attempts)
- Built dashboards to monitor authentication anomalies and suspicious activity
- Performed log correlation and threat detection aligned with SOC workflows

OSINT-Based Data Exposure Assessment Tool

Source: <https://github.com/hameezcam/osint-data-exposure-tool>

Platforms and Technology Used: Python (Flask), SQLite, HIBP API, VirusTotal API, AbuseIPDB

- Developed an OSINT-based tool to identify data exposure risks using public intelligence sources
- Integrated multiple APIs to analyze email breaches, IP reputation, and domain intelligence
- Implemented features for threat analysis, data extraction, and exposure detection
- Designed backend logic and web interface for real-time security analysis

ADDITIONAL STRENGTHS

- Strong interest in SOC operations, threat detection, and practical cyber defense.
- Hands-on experience with both blue-team monitoring and red-team simulation labs.
- Comfortable working in self-directed lab environments and learning new security tools quickly.
- Able to document technical findings clearly and connect attack behavior with detection opportunities.
